

handCLOUD: Now you drive the cloud

handCLOUD

you drive the **cloud**

We bring technology experience and expertise to the cloud

handCLOUD |

handCLOUD is the next generation of the managed cloud services offered by Alhambra, an experienced systems integrator since 1991.

handCLOUD integrates cloud-based solutions that your organization needs, simplifying migration of applications and data, and optimizing communications.

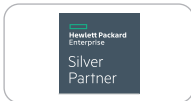

Thanks to the flexibility, scalability and customization of handCLOUD, you drive the cloud now.

We bring technology experience and expertise to the cloud

Partners |

handCLOUD allows you to leverage the most advanced service process technologies needed for you to develop your activities in a simple, flexible, and integrated manner that adapts to your organization's business.

handCLOUD is comprised of different cloud services, including:

handVIRTUAL | virtual data center services

handVIRTUAL is Alhambra's Virtual Data Center service. It provides the resources traditionally found in a physical data center, however, the provisioning and operation is streamlined and simplified with the use of virtualization environments (cloud computing). This service is implemented on the latest generation of high-availability hardware/software infrastructure, and managed by our technical staff.

handVIRTUAL is tailored to your needs and complemented with Managed Monitoring Services and Managed Backup for Data Centers and for Desktops.

handSIP | voice services in the cloud

handSIP encompasses Alhambra's cloud-based voice service offerings for business voice communications that are customized to your needs and integrated with your current infrastructure.

- ✓ VoIP Service (SIP Trunking)
- ✓ Virtual PBX
